Capabilities Statement

COMPANY SUMMARY

Concept Software & Services, Inc. (CSS) is a US-based, privately held software solutions company with an impressive track record of providing value-added solutions and services to Fortune 5000 companies and government agencies. We are a comprehensive IT consulting practice with an emphasis in custom software development and IT Talent acquisition. Concept is a recipient of the Inc. 5000 award, a certified Minority Business Enterprise (GMSDC) and a certified Disadvantaged Business Enterprise (GDOT). With world headquarters in Atlanta, Concept and its teaming partners are focused on providing solutions and services to redefine IT.

COMPANY LOCATION

CSS is located just off I-285 in Norcross, GA. This location is highly accessible metro Atlanta and Northern Georgia.

ABOUT US

We deliver a full range of application outsourcing and enterprise consulting services, providing solutions for a dynamic environment where business and technology strategies converge. Our approach focuses on new ways of combining IT innovation and adoption while also leveraging an organization's current IT assets. We work with large global corporations and new generation technology companies to build new products or services and to implement prudent business and technology strategies in today's dynamic digital environment. We use a low-risk delivery model to accelerate schedules with a high degree of time and cost predictability. Additionally, our technology and delivery innovation initiatives ensure that our clients are constantly equipped with the frameworks, skills and solutions to meet both emerging opportunities for and threats to their strategies.

Our business is based on client relationships that are driven by value, shared goals and long term partnerships, not rigid, locked-in contracts. We act as your partner in transforming your IT initiatives to best align with your business. We accomplish with a unique approach based upon the following:

- Commitment to client partnerships and their total success
- Optimal usage of offshore resources resulting in cost effective solutions
- US based domains, client managers and technology experts
- Portfolio analysis and change management core competencies

Our primary focus is helping your organization derive tangible, lasting results from your senior team's direction regarding high-level strategic issues. We think of each of these conversations as a potential 'pivot point' – an opportunity to derive strength and efficiency from the vision of an aligned executive team.

- Web Content Management Systems (Vignette, Documentum, Alfresco, Drupal, Joomla)
- Document Management Systems
- Website Development and Maintenance

PRODUCTS OFFERED

DANZ : Data Analyzer Reporting Tool for SAP R/3 Systems

OVERVIEW

This tool is used to analyze and study data from an already implemented SAP R/3 system, giving a summary of the customization and development done per module. The results are downloadable to a local PC in the form of a spreadsheet or XML data file. This data contains only high-level functionality details, not confidential financial data, and helps you to understand the system's performance statistics and frequently used transaction codes and programs. This helps in analyzing exact the functionality utilized within the SAP system. This tool does not create or modify any data or code within the system while also giving the system utilization and customization report based on the results.

This tool helps the user to understand the exact functionalities utilized within the SAP R/3 System. This gives a clear picture of the system's data utilization and frequently used transactions. This information is vital in situations such as determining the best system upgrade, purchasing a new system support contract or making new major changes to the system itself. The Performance information and reports also assist in auditing the system for proper utilization as per audit rules, or in ensuring that there are no security breaches.

SYSTEM REQUIREMENTS

DANZ should be installed on a local PC running SAP Front-End (SAPGUI) that is able to connect to SAP R/3 system. The data processing will be carried out within the SAP system; the hardware requirements for the installation PC are the same as necessary to run SAP Front-end program. This tool can be used by any SAP customers who have any of these modules (FI, CO, SD, MM, PP or PM) implemented.

LIST OF AVAILABLE REPORTS

- Custom Program Analysis
- Customer Enhancements And User-Exits Listing
- Custom Development Objects Listing
- Modified System Objects Listing
- Custom Forms/SAP script Configuration
- Custom Program Usage Statistics
- Transaction Code Usage Statistics
- Output Usage Statistics
- Functional Configuration Details: FI, CO, SD, MM, PP and PM Modules
 - Company Codes, Functional Areas, Controlling Areas, Cost Centers, Profit Centers.
 - Sales Organizations, Divisions, Distribution Channels
 - Credit Control Areas, GL Accounts, Customer Accounts, Vendor Accounts By A/c Group
 - Plants, Storage Locations, Purchase Organization, Purchasing Info Records By Type
 - Material Numbers in Purchasing Info Records
 - Purchasing Source List, Purchase Requisitions
 - Purchasing Groups, Purchasing Document type
 - Material Type, Material Group
 - MRP Types, MRP Controllers
 - BOMs, Work Centers, Routings, Locations, Equipment

Greenview: Water Reporting and Monitoring Data Management Tool

OVERVIEW

Greenview is a Windows-based continuous watershed quantity and quality-monitoring program intended for managing and displaying watershed management site environmental data. This J2EE and Oracle 10g-based application provides the most powerful features available for managing environmental data in a user-customizable database of water, metals, nutrients, soil properties and drinking water standards information.

Greenview includes environmental database management and graphical applications for tracking and analyzing ground-water data at EPA and EPD facilities, and for surface water, ground water, soil, ash, sludge, bio-tissue, metals, nutrients and air pollution monitoring data. Greenview also provides watershed assessment, tracking and environmental results that unite water quality information that was previously available only from several independent and unconnected databases.

FEATURES OF GREENVIEW

- Uses Enterprise J2EE application to process data and allow the general public to review it via the website.
- The user interface is designed using Web 2.0 standards such as DHTML and AJAX.
- Utilizes the GIS Module to map and display data from remote stations.
- Data can be presented in the web interface by displaying actual satellite imagery of the data station.
- Provides visual alerts based on the dynamic collected data.
- Built-in data migration tools convert data from legacy databases to Oracle 10g.
- Custom interface to input data directly from the data station.

BENEFITS OF GREEN VIEW

- Data is stored on a central server.
- Data can be presented to any individual over a easy to use web interface.
- Enterprise architecture enables migration of data from legacy databases to state-of-the-art Oracle database for easy storage and retrieval of large amounts of data collected over decades.
- User-friendly interface enables easy retrieval of appropriate data in a short time.
- Easy customization of the software application and various parameters.

EXISTING IMPLEMENTATION

Concept has successfully implemented GreenView at the Environment Protection Division of Georgia. The interface can be viewed at <http://www.georgiaepd.org/dnr/wrdb>.
